2.126 (b)

ACCESS AND INSPECTION OF RECORDS AND PROPERTY.

Section 2.126(b) - Access and inspection of records and property: A responsible adult shall be made available to accompany APHIS officials during the inspection process.

On Tuesday, October 12, 2010 from 12:06pm until 12:36pm and returning at 12:56pm until 1:00pm a responsible adult was not available to accompany inspectors on an Animal Welfare Act inspection. It is the Dealers responsibility to be available during normal working hours or appoint a responsible adult to act on their behalf.

Correct upon receipt.

This 1st attempted inspection was conducted by Jeff Baker, DVM and Sandra Meek, ACI.

Date: Jun-22-2010

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

In the kennel facility there are two adult Chows. One of the animals was identified on the last inspection for matts hanging down from behind both ears. The animal still has the matts. The animal was not scanned for a micro chip and was not listed in the inventory of animals on hand. The dealer stated the animal was hard to handle. The dealer needs to take measures to insure the animal is groomed and maintained to prevent skin irritations and sores. The other adult Chow, micro chip# 086-105-095 has spots of hair loss on both rear legs, the right front leg, the base of its tail, on both ears, a rubbed area on its nose and a matted area between its shoulder blades. The dealer does not have any documentation of the animal receiving any treatment. The animal needs to be evaluated by the attending veterinarian. The dealer must maintain written documentation of the evaluation and any treatment.

Affect two adults.

The other animals listed on the previous inspection report were groomed. During this inspection no animals were identified with loose stool as identified on the previous inspection. The dealer stated and it is reflected on the program of vet care sign off sheet that the attending vet was at the property three days after the last inspection. The dealer stated she received verbal instruction for treatment. The dealer did not keep any written documentation of the evaluation or treatment.

2.50

TIME AND METHOD OF IDENTIFICATION.

(b) A class "B" dealer shall identify all live dogs and cats under his or her control or on his or her premises as follows:

In the kennel facility there are three puppies, two Yorkie and a Maltese, nine weeks of age which do not have any

REEDS SPRING, MO 65737

Date: Feb-23-2010

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Sec. 2.40 Attending veterinarian and adequate veterinary care (dealers and exhibitors).(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

-There were four adult dogs seen with heavy mats. There was a cocker spaniel in the far outdoor housing area that had large mats on the ear flaps. There was a chow (newly obtained according to the licensee) that had mats hanging down from behind the ears. There was a salt and pepper/parti schnauzer that had mats on the back, and there was a shi tzu that had matting around her rear end. The licensee must remove the mats from all these dogs and carefully check the skin underneath to ensure that there are no irritations or sores. Heavy mats can trap dirt and moisture and cause serious skin problems in the dogs
This affected 4 adult dogs

-There were two outdoor pens with juvenile dogs. There was one pen with two Dogue De Bordeaux and one pen with one Rottweiler. The three young dogs had very loose, greenish brown colored stool. It was fully unformed. These were the only three dogs seen at the facility with this type of very loose stool. The young dogs appeared in good condition - bright alert and responsive. However, this was abnormal appearing stool. The licensee must have these dogs (and this stool) checked by the attending veterinarian. The licensee must keep written documentation on these three young dogs including diagnosis, treatment, and observations.
This affected 3 young dogs

3.4 (b) (4) OUTDOOR HOUSING FACILITIES.

Sec. 3.4 Outdoor housing facilities.(b) Shelter from the elements.(4) Contain clean, dry, bedding material if the ambient temperature is below 50 [deg]F (10 [deg]C). Additional clean, dry bedding is required when the temperature is 35 [deg]F (1.7 [deg]C) or lower.

Feb-23-2010

Inspection Report

-The licensee had bedding in most of the dog houses. However, there were at least 5 houses with little or no bedding. There were three pens with houses that had little bedding in the pasture area - one pen with two Rottweilers, one pen with 2 beagles, one pen with three shelties. There was one outdoor pen in the upper area with three adult schnauzers that had no bedding. There was one pen with two young puppies that had a plastic dogloo and little bedding (the plastic floor of the dog house was exposed). The temperature at the start of the inspection was 36 F. The licensee must ensure that all outdoor dog houses have adequate bedding to provide for the health and well being of the dogs in these colder temperatures.

This affected 12 dogs

To be corrected by February 24, 2010

3.4 (c)

OUTDOOR HOUSING FACILITIES.

Sec. 3.4 Outdoor housing facilities. (c) Construction. All surfaces must be maintained on a regular basis. Surfaces of outdoor housing facilities--including houses, dens, etc.--that cannot be readily cleaned and sanitized, must be replaced when worn or soiled.

-Several of the outdoor pens had holes dug by the dogs in the ground surfaces. There was one pen in the upper outdoor area where the rottweiler pup had dug under the divider fence and there was a large gap between the two pens. There were holes dug in a bulldog pen by a fence post and adjacent to the dog house. There were deep holes dug into the ground surface of the upper chow pens. There were at least two pens in the "pasture area" that had deep holes dug in the ground by the dogs, by fence lines, under dog house, and in the middle of pens. The licensee must ensure that all ground surfaces in the outdoor pens are maintained and kept in good conditions.

This affected at least 10 adult dogs

To be corrected by March 7, 2010

3.6 (a) (2) (x)

PRIMARY ENCLOSURES.

Sec. 3.6 Primary enclosures. (a) General requirements. (2) Primary enclosures must be constructed and maintained so that they:

(x) Have floors that are constructed in a manner that protects the dogs' and cats' feet and legs from injury, and that, if of mesh or slatted construction, do not allow the dogs' and cats' feet to pass through any openings in the floor;

-The licensee has dams and puppies in stack type caging in the interior of the whelping building. The feet and legs of the puppies were seen falling through the openings in the flooring. The licensee had a small carpet piece in pens, but this small piece of flooring did not prevent the legs and feet of the puppies that were attempting to move around from falling through the openings in the wire. This can cause injury to the animals and does not allow for normal locomotion.

This affected 17 puppies

Inspection Report

3.9 (b)

FEEDING.

Sec. 3.9 Feeding. (b) Food receptacles must be used for dogs and cats, must be readily accessible to all dogs and cats, and must be located so as to minimize contamination by excreta and pests, and be protected from rain and snow. If the food receptacles are not disposable, they must be kept clean and must be sanitized in accordance with Sec. 3.11(b) of this subpart. If self-feeders are used, they must be kept clean and must be sanitized in accordance with Sec. 3.11(b) of this subpart. Measures must be taken to ensure that there is no molding, deterioration, and caking of feed.

-The three red self feeders in the interior of the bulldogs' pens and the one metal self feeder for the three GSD in an outdoor pen were dirty and feed caked in the interior surfaces. The GSD pen had two feeders. One of the feeders had dirt and gravel in the food dispensing opening mixed in with the feed. The other self feeder in the pen had a rough front edge by the food dispensing opening that was trapping dirt. The red self feeders in the interior of the bulldog pens had feed caked on the interior surfaces. The licensee must ensure that all self feeders are kept clean, in good repair, and are sanitized in accordance with this section. This will ensure that the animals are provided with clean and uncontaminated feed.

This affected 7 adult dogs

To be corrected by February 28, 2010

3.11 (a)

REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control. (a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors.

-The interior section of the bulldog enclosures were dirty. There was spilled food and dirt on the interior floors. The licensee stated that she vacuumed this out once a week. These pens with the spilled feed and dirt must be spot cleaned daily and sanitized no less than once every two weeks to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors.

This affected 4 adult dogs

-The licensee appears to be picking up waste from the exterior pens on a more frequent basis. However - the two pens with the young dogs with loose stool needs to be cleaned more frequently. The three young dogs were observed stepping in and through the waste material. The licensee must remove the waste material from pens no less than once daily and as necessary to prevent soiling of the dogs in the primary enclosures and to reduce disease hazards.

This affected 3 young dogs

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Sec. 2.40 Attending veterinarian and adequate veterinary care (dealers and exhibitors). (b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

-The licensee had the animals listed on the previous inspection report seen and treated. The condition of these animals was improved and the licensee had a written statement from the attending veterinarian with diagnosis and recommended treatments for the animals.

However - the licensee had a bottle of medication in the facility that was in use and improperly labeled. There was a bottle of "Stress Tonic for PBT Puppies". The bottle contains a liquid medication that the licensee stated was currently in use in the kennel animals. The label specifies route, dosage, storage method, expiration, and a warning to keep out of reach of children. There is no ingredient list, no specific prescription for specific animals or group of animals at this facility, and no indication of who dispensed the medication. The licensee must insure that all medication in the facility is labeled appropriately with specific directions for use on the bottle, as part of the written program of veterinary care or under specific directions of the attending/treating veterinarian.

This affected all animals using this medication

3.11 (a) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control. (a) Cleaning of primary enclosures. Aug-25-2009

Inspection Report

-During this focused inspection, there was one cage observed with a female dachshund and her 4 puppies in the whelping building. This nursing mother and her puppies was in a double wide stack cage in a small room (used for medication storage, cleaning of bowls, etc) by themselves. There was an excessive amount of dried fecal material in the pen and in the trays under the pen. The licensee stated that this pen was last cleaned on Saturday. All primary enclosures must be spot cleaned on a daily basis to prevent soiling the animals and to reduce the potential for disease hazards.

This affected 5 animals

3.11 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control.(d) Pest control. An effective program for the control of insects, external parasites affecting dogs and cats, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

-There is a heavy flea infestation at the facility. There were live adult and larval fleas seen on the dogs. The attending veterinarian stated that the skin lesions seen on one of the dogs listed on the previous inspection were due to "severe flea infestation". There was one chow dog seen at the facility that had "hot spots" (under treatment). The licensee stated that they were using flea control - both on the dogs and in the environment. However, these methods are not proving to be effective. The licensee must consult with the attending veterinarian to develop a safe and more effective method of flea control for the animals and the facility. The licensee must implement and maintain a safe and effective program. Flea infestations can cause significant health problems in animals such as skin conditions which can lead to infections and intestinal parasites (tapeworms)

This affected all animals in the facility

To be corrected by September 1, 2009

This focused inspection was conducted by Jan Feldman - ACI, Dr. David Sabala - SACS, and the licensee.

Time of inspection:12:05

The items on this report and other facility issues were discussed with the licensee. The licensee was informed that this report would be sent certified mail.

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care -

Through out the kennel facility there are a total of three adults and three puppies which have vet care issues. Two of the animals are terriers, chip # 058797897 and 481D204F0B, which have sores on their back and / or hind quarters. The dealer stated and documented the enclosures had been treated for fleas and the animals dipped last on July 5, 2009 but no further treated had been administered. Juliet a French bulldog, chip # 038029828, has a raw sore on her left shoulder. The dealer had no health records of the animal receiving treatment. In the whelping building there is a mother Beagle chip # 014830849, with five puppies, six and a half weeks old. Three of the puppies are very thin. Two of the puppies are lathargic. The dealer stated they were dehydrated and she had administered fluids the previous evening. However the dealer does not have any health records nor had they been evaluated by the attending veterinarian. The French Bulldog and the three puppies must be evaluated by the attending veterinarian and the veterinarian must be consulted in reference to the Terriers. The dealer must maintain written documentation of all evaluations and all treatment.

Affects three adults and three puppies.

Correct by July 16, 2009

3.3 (a)

SHELTERED HOUSING FACILITIES.

Heating, cooling, and temperature. The sheltered part of sheltered housing facilities for dogs and cats must be sufficiently heated and cooled when necessary to protect the dogs and cats from temperature or humidity extremes and to provide for their health and well-being. The ambient temperature in the sheltered part of the facility must not fall below 50 [deg]F (10 [deg]C) for dogs and cats not acclimated to lower temperatures, for those breeds that cannot tolerate lower temperatures without stress and discomfort (such as short-haired breeds), and for sick, aged, young, or infirm dogs or cats, except as approved by the attending veterinarian. Dry bedding, solid resting boards, or other methods of conserving body heat must be provided when temperatures are below 50 [deg]F (10 [deg]C). The ambient temperature must not fall below 45 [deg]F (7.2 [deg]C) for more than 4 consecutive hours when dogs or cats are present, and must not rise above 85 [deg]F (29.5 [deg]C) for more than 4 consecutive hours when dogs or cats are present.

During the inspection the ambient temperature was measured in both the chihuahua and frenchie buildings. The ambient air temperature measured to be 92.6 degrees and 93.6 degrees F. The dealer stated the buildings did not have any electricity for approximately a week. The sheltered part of sheltered housing facilities for dogs must be sufficiently heated and cooled when necessary to protect the dogs from temperature or humidity extremes and to provide for their health and well-being. The ambient temperature in the sheltered part of the facility must not fall below 50 [deg]F (10 [deg]C) and must not rise above 85 [deg]F when dogs are present for more than four consecutive hours.

Affects twenty-one adults and seven puppies.

Correct by July 17, 2009

sides, and a floor.

On the eastern end of the kennel facility there is a set of outdoor enclosures. On the far eastern end of this area there is one enclosure which contains two adult German Sheperds. The enclosure contains one shelter for both animals. The shelter structure is not large enough for both animals to sit stand and lie in a normal manner and to turn about freely. A larger or additional shelter structure needs to be provided to the contained animals to protect their health and welfare. On the west end of the kennel facility there is an outdoor housing area which has a structure that partially covers the shelter structures. On the western end of this area there is one shelter structure whose top is shifted off of the bottom, leaving a large gap which would allow for wind and rain to enter. The shelter structure needs to be repaired or replaced to protect the contained animal from the elements and allow it to stay clean and dry.

Affects three adults.

Correct by March 9, 2009

This inspection was conducted by the Dealer, Jamilon Niemann, VMO and Sandra Meek, ACI.

The last inspection was conducted on October 30, 2008.

2.40 (b)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:

In the far eastern outdoor portion of the kennel facility there is one enclosure which contains two adult huskies, microchip #'s and names 109840025 Bojangles and 014819838 Cierra. On the gravel floor surface of the enclosure there is bloody stool. The dealer stated the animals were being treated for hook worms and this condition was reoccurring after every rain fall. The dealer stated neither the animals nor a stool sample had been evaluated for parasites. The animal needs to vbe evaluated by the attending veterinarian. The dealer must maintain written documentation of the evaluation and all treatment.

Affects two adults.

Correct by November 1, 2008

In the whelping building there was one nine week old cock-a-poo puppy, no ID, which was lethargic and lying with its limbs stiffly distended. The dealer was instructed to take the puppy immediately to the attending veterinarian for evaluation. The dealer must maintain written documentation of the evaluation and all treatment.

Affects one puppy.

2.50 (b)

TIME AND METHOD OF IDENTIFICATION.

(b) A class "B" dealer shall identify all live dogs and cats under his or her control or on his or her premises-

In the whelping building there are three enclosures which contain a total of eleven puppies that do not have any form of identification. In the Chihuahua building there is one adult Chihuahua which does not have any form of identification. All animals in the kennel facility must have an approved form of identification at all times.

Affects one adult and eleven puppies.

3.4 (b)

OUTDOOR HOUSING FACILITIES.

(B) Shelter from the elements. (3) Be provided with a wind break and rain break at the entrance.

In the far eastern outdoor portion of the kennel facility there are three enclosures whose shelter structures do not have a wind / rain break at the entrance. All outdoor shelter structures must have a wind / rain break to protect the contained animals from the elements and allow them to stay clean and dry.

Affects nine adults.

Correct by November 5, 2008.

3.6 (a) (2) (i)

PRIMARY ENCLOSURES.

Primary enclosures for dogs and cats must meet the following minimum requirements:(a) General requirements.(2) Primary enclosures must be constructed and maintained so that they: (i) Have no sharp points or edges that could injure the dogs and cats;

In the far western portion of the kennel facility there is one outdoor ground enclosure which contains five puppies. On the interior of the enclosure there is a portion of rebar type metal pipe protruding from the ground at an angle which could injure the contained animals. The pipe needs to be removed to protect the contained animals from injury.

Affects five puppies.

Correct by October 31, 2008

In an exterior enclosure portion of a ground enclosure of the whelping building there is a mother Burmese mountain dog with five puppies. On the western end of the enclosure portion is an access gate which has a piece of metal fencing material attached to the bottom. Along the top of this fencing material there are sharp points. During the inspection one of the puppies was observed several times protruding its head through a gap between the gate and the corner post catching it self on the sharp metal point. Primary enclosures must be constructed and maintained so that they have no sharp points or edges that could injure the dogs.

Affects five puppies.

Corrected during the inspection

3.11 (a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors.

In the far western outdoor portion of the kennel facility there are a total of fifteen ground enclosures containing a total of twenty-six adults. During the inspection the enclosures contained more than one day's accumulation of waste

Inspection Report

material. The dealer stated they had last been cleaned two days prior. On the far eastern side of the kennel facility there are twenty-two outdoor ground enclosures containing a total of fifty adult dogs. Approximately one fourth of the gravel floor surface of the enclosures was covered with waste material reducing the floor space available to them without soiling themselves. The dealer stated the enclosures had been cleaned the previous morning. Primary enclosures must be cleaned daily or as often as necessary to prevent an excessive accumulation of feces, to prevent soiling of the dogs and to protect the health and welfare of the contained animals.

Affects seventy-six adults.

Correct by October 30, 2008

3.11 (c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(c) Housekeeping for premises. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices required in this subpart, and to reduce or eliminate breeding and living areas for rodents and other pests and vermin. Premises must be kept free of accumulations of trash, junk, waste products, and discarded matter.

On the second day of the inspection there was a female Bull Terrier, chip # 075003583 being housed in the garage of the dealers's home. In the garage there were non husbandry items such as a gas can, cleaning chemicals, tools, and bags of fuel pellets. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices and to reduce or eliminate breeding and living areas for rodents and other pests and vermin.

Affects one adult.

Correct by November 1, 2008.

The inspection was conducted by the Dealer, Katy Vernon, ACI, Robert Whiteley, ACI and Sandra Meek, ACI.

The inspection was conducted over a two non-consecutive day time period to all the dealer to immediately take a seriously ill animal for vet care.

The last inspection was conducted on June 24, 2008.
